

Exercise 3

Please fork my public repository –
<https://github.com/SMTalim/exercise3>

Next, you need to *clone* this fork.

Now create a new local text file and name it **yourfullname.txt** Write some details about yourself in this file.

Next **add** and **commit** to your local repository and then **push** it to *your* forked **exercise3** repository.

Finally, inform the project owner (i.e. me) of the changes so that I can pull them into the repo – using a *pull* request.
